SUMMARY

Final-year B.Tech Artificial Intelligence & Data Science student graduating in 2027, focused on **AI automation, workflow orchestration, and business growth systems**. Hands-on experience building n8n workflows, LLM-powered agents, Gmail/Google Sheets automations, RAG applications, and customer-facing AI tools. Skilled in Python, JavaScript, REST APIs, Groq/OpenAI APIs, LangChain, LlamaIndex, and automation platforms such as n8n, Make, and Zapier. Strong interest in building practical AI systems for lead qualification, customer engagement, CRM follow-ups, and startup growth workflows.

EDUCATION

Guru Nanak Institutions Technical Campus

2023 – 2027

B.Tech in Artificial Intelligence and Data Science

GPA: 7.0 / 10.0

PROJECTS

Multi-Agent Research Automation System

n8n, Groq API, React, Google Sheets, Webhooks,

JavaScript

- Built a **multi-agent research assistant** where three AI agents — Researcher, Summarizer, and Formatter — collaborate to answer complex user questions and generate structured markdown research reports.
- Designed an **n8n webhook-based automation** that receives a research query, performs web search, processes results through Groq LLM agents, stores output in Google Sheets, and returns the final report to a React interface.
- Developed a **bright ChatGPT-style frontend** with research history, markdown report rendering, copy/download actions, webhook settings, and responsive UI/UX for a complete product-style automation demo.

Autonomous Business Workflow Automation System

n8n, Python, Ollama, Gmail API, Google

Sheets, REST APIs

- Built an **AI-powered email automation workflow** using n8n that classifies incoming emails, detects customer intent, and routes messages into structured follow-up actions with minimal manual effort.
- Created a **lead and customer engagement pipeline** where emails are categorized into intent types, logged to Google Sheets in real time, and prepared for business follow-up or reporting workflows.
- Developed a **business-owner friendly analytics layer** that allows users to ask questions about email activity in plain English and receive structured answers from logged workflow data.

HireFlow AI — AI Recruitment Automation Agent

n8n, Gmail API, Google Sheets, Google

Calendar, LLMs, JavaScript

- Built an **AI-powered recruitment automation workflow** that detects resume applications from Gmail, fetches PDF attachments, extracts resume text, and evaluates candidates against a job description using an LLM-based screening agent.
- Designed a **candidate ranking pipeline** that identifies skills, projects, matched and missing requirements, generates recruiter-friendly summaries, and classifies applicants as **Shortlisted**, **Review**, or **Rejected**.
- Automated HR operations by storing structured candidate records in Google Sheets, drafting professional interview emails, and creating Google Calendar interview events for shortlisted candidates.

AI-Powered Document Intelligence System

Python, LlamaIndex, OpenAI API, FastAPI, React,

ChromaDB

- Built a **RAG (Retrieval-Augmented Generation)** system that allows users to upload PDF documents, extract text, chunk content, generate embeddings, and ask source-grounded questions through a web interface.
- Implemented a local document search pipeline using vector storage and LLM-based answer generation, helping users understand long PDFs without manually reading entire files.
- Designed an end-to-end workflow connecting document upload, retrieval, LLM response generation, and frontend display with references for improved answer reliability.

Real-Time Customer Analytics Dashboard *Power BI, Google Sheets, SQL, Excel, Data Modeling*

- Built a Power BI dashboard using processed sales and customer data to analyze revenue, customer behavior, product performance, and weekly business trends.
- Created structured reporting pages including **Sales Overview**, **Customer Insights**, and **Weekly Product Performance** to support data-driven business decisions.
- Used data cleaning, calculated metrics, and visual storytelling to convert raw operational data into clear business insights for non-technical users.

ACHIEVEMENTS & ACTIVITIES

- Built and documented multiple **AI automation workflows**, including email triage, multi-agent research automation, document intelligence RAG, and Google Sheets-based business analytics systems.
- Completed **6 industry certifications** spanning data analytics, LLM application development, AI agents, workflow automation, BigQuery, and Python.
- Actively maintaining a **public GitHub portfolio** of AI automation, agentic AI, data analytics, and workflow orchestration projects.
- Participated in AI/ML learning projects and rapid prototyping activities focused on practical automation and data-driven solutions.

SKILLS

Programming: Python, JavaScript, SQL

AI / LLM: OpenAI API, Groq API, Claude, Gemini, LangChain, LlamaIndex, Prompt Engineering, RAG, Function Calling

Agents & Automation: Multi-Agent Systems, Agentic Workflows, n8n, Make, Zapier, Webhooks, REST APIs, Workflow Orchestration

Business Automation: Lead Qualification, Customer Engagement Workflows, CRM Follow-up Automation, Email Automation, Google Sheets Automation, AI Research Workflows, HR Automation, Resume Screening, Interview Scheduling

Backend: FastAPI, PostgreSQL, MongoDB

Data Analytics: Pandas, NumPy, Scikit-learn, Data Cleaning, EDA, Power BI, Excel, Google BigQuery

Frontend & Visualization: React.js, Streamlit, Tailwind CSS, Power BI, Tableau, Responsive UI/UX

Cloud & Tools: Google Cloud BigQuery, Google Sheets API, Gmail API, Google Calendar API, Git, GitHub, VS Code, ChromaDB, FAISS, PDF Text Extraction

Currently Exploring: ManyChat, CRM Automation, AI-driven Growth Systems, Customer Engagement Chatbots

CERTIFICATIONS

Google Data Analytics — Coursera

NPTEL — Data Analytics with Python

Google BigQuery Skill Badges

DeepLearning.AI — LangChain for LLM Application Development

Hugging Face — AI Agents Course

n8n Workflow Automation Certification
